Search

Full text search

Full text search (or probability search) searches all text in the address register (fields 'Address', Block, 'Rote', 'Owner', 'Owner (Church Book)').
The search is case insensitive. Truncation (wildcard) is not possible.

Example:
A search for 'agardh ' results in both the block Agardh and a person Agardh as owner.
If you search for 'Johanna Ohlsson', you get all records that contain the words 'Johanna' or 'Ohlsson'.

"**Choose one of"** - Note that search is possible only with one of the options below at a time.

Field no

Search for a certain field number. Note that it must be an exact match.
Truncation with '*' works. If a search does not generate any results, truncation will be automatically added.

Example:
Search for '118*'generates 2 results - St. Södergatan 3 and Wårfrugatan 4, both of which have plots no. '118, 119'
Search for '166B' generates no result.
Search for '166 B' generates 1 result - L. Tvärgatan 13
Search for '166*' generates 9 reults

Block

Search for Block and 'Brunius' in the dropdown menu results in all houses in the block Brunius.

The small administrative unit "rote"

Search for Rote and 'Krafts' results in all houses in Kraft's rote.

Description of result in columns:
